ABOUT ME

I'm a frontend engineer with 4.5 years building a real-time broadcast graphics editor and renderer in React and TypeScript, where output runs live on air. Long-term owner of core feature lines (ticker/crawler animation engine, data-binding system), with a track record of extracting complex stateful UI logic into unit-tested plain-TypeScript modules

EXPERIENCE

Software Engineer II

Flowics (acquired by Vizrt)

Argentina

2021 - 2026

Real-time broadcast graphics editor and renderer (React, Typescript, Node.js) used for live on-site production.

- Owned the ticker/crawler animation engine for 3+ years: rewrote its core to eliminate on-air visible gap defect that had resisted incremental fixes; extracted business and prefetching logic into plain-TypeScript manager classes with full Jest coverage.
- Built the hierarchical data-binding picker (TreeRenderer) and binding modal — tree navigation, search highlighting, index controls — made it usable with large provider schemas via list virtualization and memoized comparators; rewrote the underlying path engine to full JSON Pointer RFC 6901 compliance.
- Shipped a self-serve font management feature across two codebases: multi-file upload UI with client-side font parsing backed by a bulk REST API using MongoDB transactions and optimistic concurrency while supporting the legacy workflow.

SKILLS

Skills: TypeScript, JavaScript, React (hooks and class components, context, memoization, React Profiler), Redux, redux-saga, reselect, Canvas API, GSAP, CSS animations, Jest, Cypress, Storybook, Node.js (Hapi, Express), MongoDB, file-format parsing, font parsing, Java, Python, Ruby, Docker, Git, GitHub Actions, GitLab Pipelines, SQL, Godot, Jira

PROJECTS

Interactive 3D Scene Web App

2025

- Developed a 3D scene with an island and airplane, playable from the browser.
- The terrain is made procedurally based on a heightmap, textured using shaders based on the shapes and heights of the generated mesh.

D&D Battle Tracker App (course project)

2021

- Designed custom UI icons and layouts in Adobe XD and successfully implemented them within Android Studio.
- Worked in a team of three to develop an Android application for tracking D&D combat, featuring character creation and real-time status management.

LANGUAGES

Spanish: Native

English: Fluent

EDUCATION

Instituto Tecnológico de Buenos Aires, Argentina

2017 - 2027

Software Engineering
